DETAILED ACTION

Reasons for Allowance

The primary reason for the allowance of claims 1-2 is the inclusion of the limitation of when the sheet is conveyed in a specific direction a predetermined feeding distance (L_x) during the conveying operation for each path, the control means permits the conveying means to first convey the sheet a predetermined distance (L_1) in the specific direction (+X direction), then to convey the sheet a direction (-X), the opposite of the specific direction (+X), a distance (L : $L = L_1 + \Delta L_1$) that is obtained by adding a short distance (ΔL_1) to the predetermined distance (L_1), and to further convey the sheet in the specific direction (+X) a distance ($L_x + \Delta L_1$). It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The prior art made of record and not relied on is considered pertinent to applicants disclosure. Saito et al (U.S. Pub. 2002/0140800) discloses a conveying means feeding the sheet in forward and reverse directions (Figures 14-15; Paragraphs 0046-0050), however Saito fails to disclose a control means permitting the conveying means to first convey the sheet a predetermined distance (L_1) in the specific direction (+X direction), then to convey the sheet a direction (-X), the opposite of the specific direction (+X), a distance (L : $L = L_1 + \Delta L_1$) that is obtained by adding a short distance (ΔL_1) to the predetermined distance (L_1), and to further convey the sheet in the specific direction (+X) a distance ($L_x + \Delta L_1$). Levinson (U.S. Pat. 4,269,522) discloses a bi-

directional feed apparatus, however Levinson does not disclose a controlling means permits the conveying means to first convey the sheet a predetermined distance (L_1) in the specific direction (+X direction), then to convey the sheet a direction (-X), the opposite of the specific direction (+X), a distance (L : $L = L_1 + \Delta L_1$) that is obtained by adding a short distance (ΔL_1) to the predetermined distance (L_1), and to further convey the sheet in the specific direction (+X) a distance ($L_x + \Delta L_1$).
